Lesson 1 · 重點複習 Review

Break Old Habits, Practice Change

突破慣性、練習改變

For working professionals · 職場專業人士版

重點 Key points

1. **A habit is something you do again and again — often without thinking. Many things you do every day happen on autopilot.**
   習慣就是一再重複、常常不用想就會做的事。我們每天做的很多事，都是在「自動駕駛」。

2. **Every habit is formed by practice. Good habits and bad habits are made the same way.**
   每個習慣都是練出來的。好習慣和壞習慣，形成的方式一模一樣。

3. **When you do something again and again, your brain wraps that network in myelin. The signal goes faster, so the action gets easier.**
   一件事一再重複，大腦會在那條神經網路外面包上髓鞘；訊號傳得更快，動作就越來越輕鬆。

4. **The good news: a habit makes things automatic. The bad news: a habit can make you rigid.**
   好消息：習慣讓事情自動化。壞消息：習慣也可能讓人僵化。

5. **Your brain can change at any age. Like Arthur: small steps, many times, every day.**
   大腦在任何年紀都能改變。就像 Arthur：一小步、做很多次、每天做。

關鍵詞 Key words

habit 習慣
Something you do again and again — often without thinking.
一再重複、常常不用想就會做的事。

autopilot 慣性、自動駕駛
When you do something without thinking about it. Your brain does it for you.
不經思考就做出反應，大腦替你「自動駕駛」。

decision fatigue 決策疲勞
After many decisions your brain gets tired. Then you often take the easy choice.
做了太多決定，大腦累了，於是常常選最省力的那一個。

neuron 神經元
A brain cell. It sends very small electric signals.
腦細胞，會傳送很小的電訊號。

signal 電脈衝、訊號
A very small electric message inside your body.
身體裡非常微小的電訊息。

network 電網、神經網路
Many neurons connected together. One network does one job — a move, a thought, a feeling.
許多神經元連在一起；一個網路負責一件事：一個動作、一個想法、一種感受。

myelin 髓鞘

A fatty layer around a nerve fiber. It stops the signal leaking out, so the signal goes much faster.
包在神經纖維外的脂肪層，防止訊號外漏，讓訊號傳得更快。

muscle memory 肌肉記憶

Your body does a move without thinking, because you have practiced it many times.
練習很多次之後，身體不用想就能做出動作。

use it or lose it 用進廢退

If you use a skill, it gets stronger. If you stop, it gets weaker.
常用的能力會變強，不用就會退步。

automatic 自動化

It happens by itself. You do not need to think.
自己就會發生，不需要思考。

rigid 僵化

Hard to change. You do the same thing, even when it does not work.
很難改變；就算沒效，還是一直用同樣的方法。

neuroplasticity 神經可塑性

Your brain can change. When you practice, it builds new networks — at any age.
大腦會改變；只要練習，任何年紀都能建立新的神經網路。

自我檢查 Check yourself

1. What does myelin do?
髓鞘有什麼作用？

A It makes new neurons.
製造新的神經元。

B **It makes the signal faster.**
讓訊號傳得更快。

C It helps you sleep.
幫助睡眠。

D It makes you forget.
讓你忘記事情。

> **B** · Myelin wraps the nerve fiber, so the signal does not leak and goes much faster.
> 髓鞘包住神經纖維，訊號不會外漏，傳得快很多。

2. How does a habit form?
習慣是怎麼形成的？

A You are born with it.
天生就有。

B You read about it.
看書讀到的。

C **You do it again and again.**
一做再做，反覆練習。

D You think about it once.
想過一次就會了。

> **C** · "Every habit is formed by practice." Good habits and bad habits too.
> 「每個習慣，都是練出來的。」好習慣、壞習慣都一樣。

3. Tom always answers email the same way, even when it doesn't work. His habit is...
Tom 回 email 永遠同一套，就算沒效也一樣。他的習慣是……

A **rigid**
僵化

B automatic
自動化

C new
新的

D fast
快速

> **A** · rigid = hard to change. That is the bad side of a habit.
> 僵化＝很難改變。這是習慣的壞處。

4. Your colleague Mia always says "no" to new ideas. Can she change?
你的同事 Mia 對新點子總是說「不」。她能改變嗎？

A No. That is who she is.
不能，她就是這種人。

B Only when she was young.
只有年輕時才能改。

C **Yes — with practice, the brain can change.**
可以。只要練習，大腦就能改變。

D Only if the boss tells her.
只有主管要求她才會改。

> **C** · neuroplasticity: the brain can change at any age. Remember Arthur.
> 神經可塑性：大腦在任何年紀都能改變。想想 Arthur。

再看一次 Watch again

Arthur's story
Arthur 的故事

Watch for: What did Arthur do every day? What changed?
注意看：Arthur 每天做了什麼？什麼改變了？

這一週 This week

This week, notice your autopilot. Write down three things you do every day without thinking — at work, at home, with your phone. Is each one helping you?
這一週，留意自己的「自動駕駛」：寫下三件每天不用想就會做的事——在工作上、在家裡、拿起手機的時候。每一件對你有幫助嗎？

Next time: how to find the habits that don't help you.
下一次：發現自己「無效習慣」的方法。
